Letter of Intent

Participation in the European Consortium for Safe Service Robots (SREU)

We express our intent to participate in SREU with the objective of strengthening IT security in line with European cybersecurity and data protection legislation, and of meeting fleet owners' compliance requirements by operating service robot manufacturers' cloud systems under trusted European custody, auditing manufacturer firmware, and contributing to the development of future standards.

Scope of Participation

- Support SREU's initiative to operate manufacturer clouds under European custody
- Engage in joint discussions with robot manufacturers
- Promote SREU as preferred cloud custodian in relevant projects
- Participate in standardization and certification processes

Tentative Roadmap

1. Joining forces to run fully-featured, compliant Gausium, Pudu, and Lionsbots clouds in European custody. Other manufacturers might follow.
2. Developing standards and certifying European manufacturer clouds
3. Developing standards and regular audits of firmware versions.
4. Offering an IoTHub based on standards to offer a manufacturer cloud-free alternative.

Public Representation

We agree to be listed as a consortium participant on saferobots.eu, including provision of logo, a public statement, and a short video interview of a company representative.

Acquisition Support

We support the acquisition of additional Letters of Intent aligned with SREU objectives.
